OUR STORY

Innovative bee venom collecting equipment allows us to collect the highest quality bee venom in the world. We produce bee venom since 2014. At the moment, we have 43 cooperators together producing 10 kg of highly quality bee venom per year. Along with bee venom production, we developed a unique technology for bee venom collecting so we can proudly announce that we succeeded to collect the highest amount of bee venom from one colony, in 25 minutes with ~70% of melittin content.
